## EXPERIENCES

Manufacturing Company  
(Corporation)  
(Solutions Provider and Developer) 2018 - 2022

This company offers different services, They have manufacturing, Direct Selling, Financing and Construction, I was very fortunate to become part of this company I've gained a lot knowledge experiences by building different kinds of software applications. The notable softwares I created for them are the following: Timekeeping and Payroll, MLM Software, Loan Management Software and Inventory

- Design Databases
- Improve and optimize current frameworks
- Manage Projects from implementation to maintenance
- Mentor new employees
- Git for version control
- I was task to conceptualize a solutions for their services
- Collect solution requirements and operations analysis
- Design user flow, create wire frames and demo prototypes

SSB GROUP of Companies  
(Software Solution Architect/  
Software Provider) 2019 - 2023

This company provides property management for popular condominiums in the Metro, they handle leasing, selling, maintenance and anything in between. without proper software the company is struggling to expand, I met the owner and we created their very first portal which helps them manage their day to day task, creating invoices and tracking tasks now become much easier.

### SAME AS THE FIRST COMPANY PLUS THE FOLLOWING

- Software integration with Payment solution provider PayPal and Dragon Pay
- On boarding contractual developers
- Checks and validates code deployed by other developers
- Creating Proposals for system upgrades ( better flows, optimizations, resources and files management)

SPI Global (now Straive)  
(Senior Software Engineer) 2021 - 2023

My main task to the company is to maintain one of the largest account in the company a custom software application that deals with automating and tracking down crash reports, I also develop a tool for that software to enable the operations to increase the quality of their reports. Also I help the other team to design UX solution on of their SAAS project.

- I was task to create a system design for the complex feature they'll be adding on the system.
- Crash Management Software tech lead.
- Code Analysis, Development and Deployment
- Understanding Purpose and Feature requirements gathering from operations
- Discussing Design and Issues and Proposing Solutions
- Assisting Different departments
- Creating Customize Reports
